Membrane Lipid Transporter Symposium 2018

Flippases, Floppases and Scramblases

Sep 27–28

at Kyoto University iCeMS Main Building 2F Seminar Room

> Free to participate No registration required

Wonhwa Cho U of Illinois at Chicago, USA Toyoshi Fujimoto Nagoya U Todd Graham Vanderbilt U, USA Sanja Jelic Columbia U, USA Toshihide Kobayashi U of Strasburg, France Katsumori Segawa Osaka U Hye-Won Shin Kyoto U Jun Suzuki Kyoto U Alan Tall Columbia U, USA Kazuma Tanaka Hokkaido U

Hosted by:

Japan Society for the Promotion of Science Kakenhi Kiban (S) "Uncovering the secrets of lipid-transporting ABC proteins" iCeMS, Kyoto University Institute for Advanced Study

Kazumitsu Ueda Kyoto U

Rikiya Watanabe U of Tokyo

Masato Umeda Kyoto U

important for cell functions. Molecular identities of lipid flippases, floppases and scramblases have been identified and their physiological roles are being revealed. Furthermore, cholesterol, another main component of the plasma membrane, is also distributed asymmetrically and its temporal regulation is important for the modulation of various cellular functions. This symposium is aiming a paradigm shift of the concept of the plasma membrane by achieving a comprehensive understanding of membrane lipid transporters such as flippases, floppases and scramblases.

Asymmetric distribution of phospholipids across the plasma membrane and its local changes are
