

Developmental Cell

Volume 39
Number 6

December 19, 2016

19 December 2016
Volume 39, Issue 6

On the cover: The extrusion of tumor cells from epithelia can promote or prevent tumorigenesis. Depicted here is the dynamic displacement of a tumor cell away from an undulating epithelium. To learn about how Slit-Robo signaling controls tumor cell extrusion from the *Drosophila* epithelium, see Vaughn and Igaki, pp. 683–695. Cover design by Jenelle Lee.
